

The Theory of Everything

The Theory of Everything

A conundrum convoluted in consequential ideas that all pose more questions than answers and more inaccuracies than the absence of a straight line in nature

It's within everything that we theorise everything. It is within everything that we apply theory to everything

With the need to understand it all we apply formulas and equations which do nothing but further complicate the very discrepancies we try to assimilate into known knowledge. All is factual until proven otherwise

We chase the answers to the furthest parts of the stratosphere forgetting to look into the deepest parts of ourselves to find solace

With the theory of everything, the resolute that provides it with a level of density or substance if you will is love

And yet we have barely scratched the surface
